

KLAFS
MY SAUNA AND SPA

ICE LOUNGE

A COOL COUNTERPOINT

The plunge pool and dousing shower are most commonly associated with a refreshing cool-down after sweating it out in the sauna. Even a short walk in the fresh air is popular – but unfortunately not always possible, because not every spa has an outdoor area. And even when available, this is not always a refreshing experience because it's not always cold outside. At the same time the cooling down is to the sauna bath what a trowel is to the bucket.

The new ICE LOUNGE promises now an optimum post-sauna refreshment all year round.

The central highlight and source of the coveted coldness is the optional STALAGMIT ice fountain, from which – as the name implies – rather than falling from above, the ice chunks gradually grow upwards. This small, frosty spectacle is not only soothing, but also invites you to grab one or two frost-ferns and use them to assist your cool-down.

The structural design of the ICE LOUNGE ensures additional 'coolness' in every sense of the word. The room is cooled down to 14 to 16°C and lined with backlit acrylic glass elements – enhanced by a perfect icy design that is replicated in the cube seats and the panels of the ice fountain.

The icy experience can be further enhanced with the optional ATMOSPHERE by KLAFS, complete with stunning ultra-high resolution screens that show dramatic nature images: from snowy peaks to drifting ice floes – you'll be enjoying a healthy chill in no time!

The ICE LOUNGE creates a cool highlight for every contemporary spa – a memorable spectacle that will become synonymous with your outstanding spa concept.

01 Top-notch sensory experience: the room is provided with approx. 14 to 16°C of cold air. By a dosing system a fragrance can be added and contributes in turn to a revival of the respiratory tract. The 'polar timeout' is supported by the optional use of our new multimedia system ATMOSPHERE by KLAFS. It is qualified for permanent operation in commercial facilities and can perfectly reproduce the brilliant quality of the films. Intricately con-structed frames allow several monitors to be combined to present one continuous image.

02 Cooling down after the sauna gets our circulation going and strengthens the immune system.

03 Details matter: wall coverings made of high-quality acrylic glass in ice optics and backlighting of the walls make the ICE LOUNGE a real spa highlight.

ONE PRODUCT, MANY BENEFITS

Impressive cooling feature with unique, distinctive ice optics – a real innovation on the market.

Ideal retrofit product for the conversion or expansion of existing spas.

Due to the smooth, non-porous surface there are few attack surfaces for germination, therefore very hygienic. The surface is very easy and quick to clean.

Very good energy balance: relatively low power consumption. No need for regular defrosting.
